

Unit 3 Group Work
PCHA 2022-23 / Dr. Kessner

Name / Pledge:

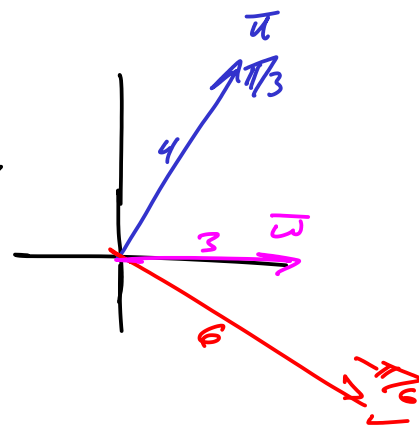

KEY

Partner(s):

You can use your notes and/or textbook. No calculator. Have fun!

1. Suppose you have the following vectors:

$$\begin{aligned}\vec{u} &= \langle 2, 2\sqrt{3} \rangle = 4 \langle \frac{1}{2}, \frac{\sqrt{3}}{2} \rangle \\ \vec{v} &= \langle 3\sqrt{3}, -3 \rangle = 6 \langle \frac{\sqrt{3}}{2}, -\frac{1}{2} \rangle \\ \vec{w} &= \langle 3, 0 \rangle\end{aligned}$$

Calculate the following:

a) $|\vec{u}| = 4$

b) $|\vec{v}| = 6$

c) Unit vector in the direction of \vec{v} . $\frac{\vec{v}}{|\vec{v}|} = \frac{1}{6} \langle 3\sqrt{3}, -3 \rangle = \langle \frac{\sqrt{3}}{2}, -\frac{1}{2} \rangle$

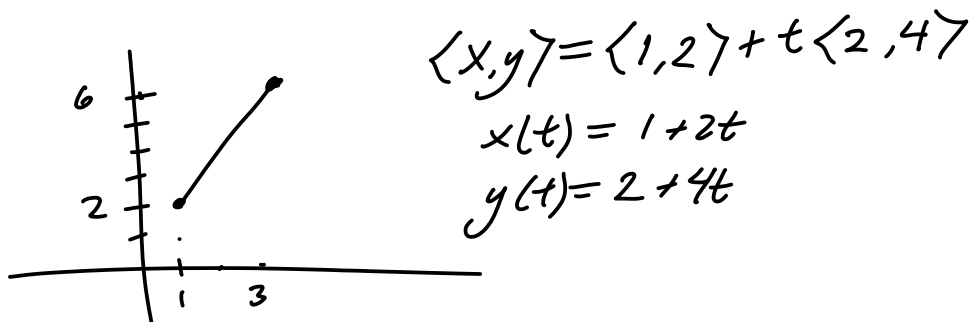

d) Angle between \vec{u} and \vec{v} .

$$\cos \theta = \frac{\vec{u} \cdot \vec{v}}{|\vec{u}| |\vec{v}|} = \frac{\langle 2, 2\sqrt{3} \rangle \cdot \langle 3\sqrt{3}, -3 \rangle}{4 \cdot 6} = 0 \Rightarrow \theta = \pi/2$$

e) Angle between \vec{u} and \vec{w} .

$$\begin{aligned}\cos \theta &= \frac{\vec{u} \cdot \vec{w}}{|\vec{u}| |\vec{w}|} = \frac{\langle 2, 2\sqrt{3} \rangle \cdot \langle 3, 0 \rangle}{4 \cdot 3} = \frac{6}{12} = \frac{1}{2} \\ &\Rightarrow \theta = \pi/3\end{aligned}$$

2. a) Parametrize the line segment from $(1, 2)$ to $(3, 6)$.

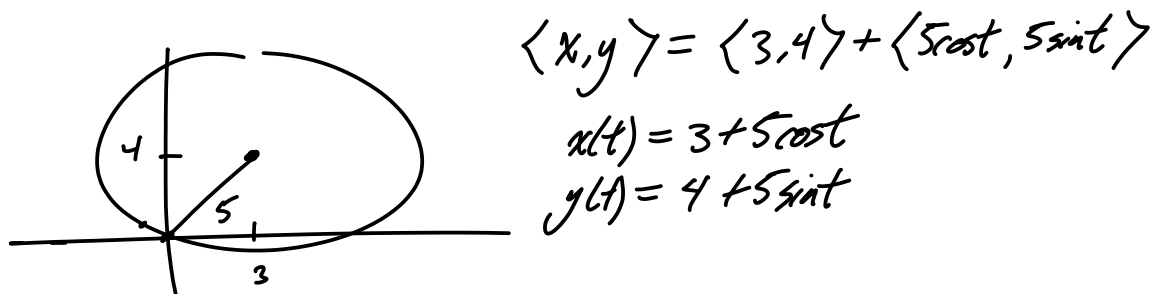

- b) Parametrize the line segment from $(3, 6)$ to $(1, 2)$ (same points, opposite direction).

$$\langle x, y \rangle = \langle 3, 6 \rangle + t \langle -2, -4 \rangle$$

$$x(t) = 3 - 2t$$

$$y(t) = 6 - 4t$$

- c) Parametrize the circle with center $(3, 4)$ and radius 5.

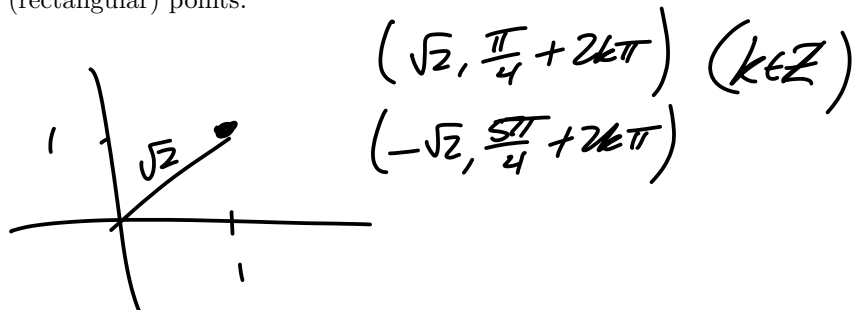

- d) Parametrize the same circle, but make the period = 6.

$$x(t) = 3 + 5 \cos\left(\frac{2\pi}{6}t\right)$$

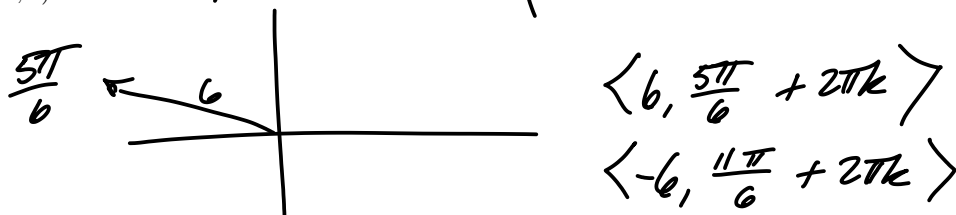

$$y(t) = 4 + 5 \sin\left(\frac{2\pi}{6}t\right)$$

3. Find all polar coordinates of the following (rectangular) points:

a) (1, 1)

b) $(-3\sqrt{3}, 3) = 6(\frac{-\sqrt{3}}{2}, \frac{1}{2})$

Convert the following equations from rectangular to polar coordinates:

c) $3x + 4y = 5$

$$\begin{aligned} 3r\cos\theta + 4r\sin\theta &= 5 \\ r(3\cos\theta + 4\sin\theta) &= 5 \\ r &= \frac{5}{3\cos\theta + 4\sin\theta} \end{aligned}$$

d) $x^2 + y^2 = 25$

$$r = 5$$

Convert from polar to rectangular:

e) $r = -5\sin\theta$

$$\begin{aligned} r^2 &= -5r\sin\theta \\ x^2 + y^2 &= -5y \\ x^2 + (y^2 + 5y + \frac{25}{4}) &= \frac{25}{4} \\ x^2 + (y + \frac{5}{2})^2 &= (\frac{5}{2})^2 \end{aligned}$$

f) $r = 5\csc\theta$

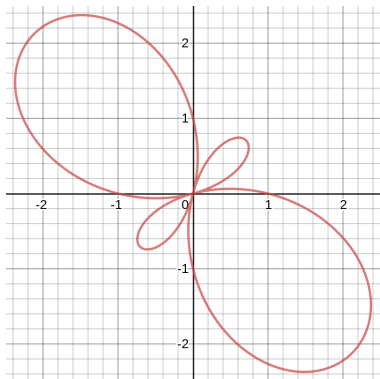

$$\begin{aligned} r &= \frac{5}{\sin\theta} \\ r\sin\theta &= 5 \\ y &= 5 \end{aligned}$$

4. Analyze the graph of the polar function $r = 1 - 2 \sin 2\theta$:

1) Find the max $|r|$ values and θ values where they occur.

2) State and prove any symmetry relations.

3) **Challenge:** What is going on at $\frac{\pi}{4}$ and $\frac{5\pi}{4}$?

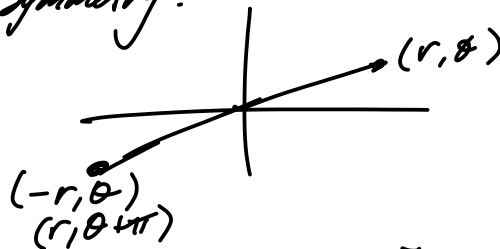

$$r = 1 - 2 \sin 2\theta$$

$$\max |r| = 3 \text{ when } \sin 2\theta = -1$$

$$2\theta = \frac{3\pi}{2} + 2\pi k$$

$$\theta = \frac{3\pi}{4} + \pi k$$

origin symmetry:

check:

$$\begin{aligned} r &\stackrel{?}{=} 1 - 2 \sin[2(\theta + \pi)] \\ &= 1 - 2 \sin(2\theta + 2\pi) \\ &= 1 - 2 \sin 2\theta \quad \checkmark \end{aligned}$$

5. For each of the following 2x2 matrices, determine whether it is invertible, and if so, find the inverse matrix and the determinant of the inverse.

$$A = \begin{pmatrix} 3 & 0 \\ 0 & 3 \end{pmatrix} \quad \det A = 9 \Rightarrow \text{invertible} \quad A^{-1} = \frac{1}{9} \begin{pmatrix} 3 & 0 \\ 0 & 3 \end{pmatrix} = \begin{pmatrix} 1/3 & 0 \\ 0 & 1/3 \end{pmatrix}$$

$$\det A^{-1} = 1/9$$

$$B = \begin{pmatrix} -2 & 0 \\ 0 & 2 \end{pmatrix} \quad \det B = -4 \Rightarrow \text{invertible} \quad B^{-1} = \frac{1}{-4} \begin{pmatrix} 2 & 0 \\ 0 & -2 \end{pmatrix} = \begin{pmatrix} -1/2 & 0 \\ 0 & 1/2 \end{pmatrix}$$

$$\det B^{-1} = -1/4$$

$$C = \begin{pmatrix} 0 & 2 \\ 2 & 0 \end{pmatrix} \quad \det C = -4 \Rightarrow \text{invertible} \quad C^{-1} = \frac{1}{-4} \begin{pmatrix} 0 & -2 \\ -2 & 0 \end{pmatrix} = \begin{pmatrix} 0 & 1/2 \\ 1/2 & 0 \end{pmatrix}$$

$$\det C^{-1} = -1/4$$

$$D = \begin{pmatrix} 1 & 2 \\ 2 & 4 \end{pmatrix} \quad \det D = 0 \quad \text{not invertible}$$

Let $E = \begin{pmatrix} 6 & 5 \\ 5 & 4 \end{pmatrix}$. Find E^{-1} . Verify that $EE^{-1} = I$.

$$\det E = -1 \quad E^{-1} = \frac{1}{-1} \begin{pmatrix} 4 & -5 \\ -5 & 6 \end{pmatrix} = \begin{pmatrix} -4 & 5 \\ 5 & -6 \end{pmatrix}$$

$$EE^{-1} = \begin{pmatrix} 6 & 5 \\ 5 & 4 \end{pmatrix} \begin{pmatrix} -4 & 5 \\ 5 & -6 \end{pmatrix} = \begin{pmatrix} 25-24 & 0 \\ 0 & 25-24 \end{pmatrix} = I = E^{-1}E \quad \checkmark$$

Use the inverse matrix you found to solve the following linear systems:

$$\begin{aligned} 6x + 5y &= 1 \\ 5x + 4y &= 0 \end{aligned} \quad E \begin{pmatrix} x \\ y \end{pmatrix} = \begin{pmatrix} 1 \\ 0 \end{pmatrix} \Rightarrow \begin{pmatrix} x \\ y \end{pmatrix} = E^{-1} \begin{pmatrix} 1 \\ 0 \end{pmatrix} = \begin{pmatrix} -4 & 5 \\ 5 & -6 \end{pmatrix} \begin{pmatrix} 1 \\ 0 \end{pmatrix} = \begin{pmatrix} -4 \\ 5 \end{pmatrix}$$

$$\begin{aligned} 6x + 5y &= 0 \\ 5x + 4y &= 1 \end{aligned} \quad \begin{pmatrix} x \\ y \end{pmatrix} = E^{-1} \begin{pmatrix} 0 \\ 1 \end{pmatrix} = \begin{pmatrix} 5 \\ 4 \end{pmatrix}$$

$$\begin{aligned} 6x + 5y &= 1 \\ 5x + 4y &= 2 \end{aligned} \quad \begin{pmatrix} x \\ y \end{pmatrix} = E^{-1} \begin{pmatrix} 1 \\ 2 \end{pmatrix} = \begin{pmatrix} -4 & 5 \\ 5 & -6 \end{pmatrix} \begin{pmatrix} 1 \\ 2 \end{pmatrix} = \begin{pmatrix} 6 \\ -7 \end{pmatrix}$$

6. Consider the following system of linear equations:

$$\begin{aligned}x + 3z &= 4 \\ -x - 2z &= -3 \\ y - 2z &= -1\end{aligned}$$

a. Write the linear system as a matrix equation.

$$\underbrace{\begin{pmatrix} 1 & 0 & 3 \\ -1 & 0 & -2 \\ 0 & 1 & -2 \end{pmatrix}}_A \begin{pmatrix} x \\ y \\ z \end{pmatrix} = \begin{pmatrix} 4 \\ -3 \\ -1 \end{pmatrix}$$

b. Calculate the determinant of the matrix to verify that the matrix is invertible.

$$\begin{aligned}\det A &= 1 \begin{vmatrix} 0 & -2 \\ 1 & -2 \end{vmatrix} + 0 \begin{vmatrix} : & : \\ : & : \end{vmatrix} + 3 \begin{vmatrix} -1 & 0 \\ 0 & 1 \end{vmatrix} \\ &= 2 - 3 \\ &= -1 \quad (\text{invertible})\end{aligned}$$

c. Find the inverse matrix and use it to solve the system.

$$\begin{aligned}&\begin{pmatrix} 1 & 0 & 3 & | & 1 & 0 & 0 \\ -1 & 0 & -2 & | & 0 & 1 & 0 \\ 0 & 1 & -2 & | & 0 & 0 & 1 \end{pmatrix} \\ R_1 + R_2 &\rightarrow \begin{pmatrix} 1 & 0 & 3 & | & 1 & 0 & 0 \\ 0 & 0 & 1 & | & 1 & 1 & 0 \\ 0 & 1 & -2 & | & 0 & 0 & 1 \end{pmatrix} \\ R_{23} &\rightarrow \begin{pmatrix} 1 & 0 & 3 & | & 1 & 0 & 0 \\ 0 & 1 & -2 & | & 0 & 0 & 1 \\ 0 & 0 & 1 & | & 1 & 1 & 0 \end{pmatrix} \\ -3R_3 + R_1 &\rightarrow \\ 2R_3 + R_2 &\rightarrow \begin{pmatrix} 1 & 0 & 0 & | & -2 & -3 & 0 \\ 0 & 1 & 0 & | & 2 & 2 & 1 \\ 0 & 0 & 1 & | & 1 & 1 & 0 \end{pmatrix} \\ &\quad \underbrace{\begin{pmatrix} -2 & -3 & 0 \\ 2 & 2 & 1 \\ 1 & 1 & 0 \end{pmatrix}}_{A^{-1}}\end{aligned}$$

$$\begin{aligned}A \begin{pmatrix} x \\ y \\ z \end{pmatrix} &= \begin{pmatrix} 4 \\ -3 \\ -1 \end{pmatrix} \\ \begin{pmatrix} x \\ y \\ z \end{pmatrix} &= A^{-1} \begin{pmatrix} 4 \\ -3 \\ -1 \end{pmatrix} \\ &= \begin{pmatrix} -2 & -3 & 0 \\ 2 & 2 & 1 \\ 1 & 1 & 0 \end{pmatrix} \begin{pmatrix} 4 \\ -3 \\ -1 \end{pmatrix} \\ &= \begin{pmatrix} -8 + 9 + 0 \\ 8 - 6 - 1 \\ 4 - 3 + 0 \end{pmatrix} \\ &= \begin{pmatrix} 1 \\ 1 \\ 1 \end{pmatrix}\end{aligned}$$
